# Vincent Bryant Yuson

yusonvincentbryan@gmail.com | +639774818890 | Antipolo City, Philippines

## PROFESSIONAL SUMMARY

Computer Engineering student at the University of Rizal System – Antipolo Campus with experience in software quality assurance, web development, database integration, and technical documentation. Skilled in manual software testing, test case development, defect identification, and preparing test reports. Knowledgeable in applying programming concepts and testing methodologies to academic and practical projects, with familiarity in test automation tools and web technologies. Demonstrates strong analytical thinking, problem-solving, attention to detail, and teamwork through technical projects and professional experience.

## WORK EXPERIENCE

**Bemo Academic Consulting** – *Part-Time Software Tester* **April 2026 – Present**

- Tested web-based applications manually to verify that every feature worked as expected, helping the team deliver dependable software.
- Identified and reported bugs, errors, and unexpected system behavior, giving developers clear details to resolve issues quickly.
- Prepared test documentation and reports on results, defects, and application behavior, keeping the team informed of product quality.
- Assessed website functionality to ensure software quality and reliability before use.
- Collaborated with team members through clear, professional communication, supporting smooth and productive teamwork.

## PROJECTS

**JobInterviewPro** – *Software Tester* **Contest Winner, 2025**

*AI-assisted web application that helps users practice job interviews and prepare for employment.*

- Tested application features against their intended requirements, confirming the app performed as designed.
- Documented bugs, errors, and unexpected behavior, enabling the team to fix problems before release.
- Evaluated user experience and feature reliability, helping make the platform dependable for job seekers.

**Eco-Smart Station (RainErgy)** – *System Developer & Tester* **Thesis**

*Eco-friendly station integrating rainwater harvesting and hybrid renewable energy solutions.*

- Developed and implemented parts of the station, delivering a working sustainable-energy and water-harvesting solution.
- Executed system tests and functionality verification to confirm it operated according to its intended requirements.
- Troubleshot technical issues and evaluated system performance, improving the station's reliability.
- Collaborated with teammates across development, testing, and implementation to complete the project.

## EDUCATION

**University of Rizal System – Antipolo Campus** – *BS in Computer Engineering* **Expected Graduation: 2027**

**Sumulong College of Arts and Sciences** – *STEM* **2021 – 2023**

## TECHNICAL SKILLS

**Software QA & Testing**

- Manual Testing
- Functional Testing
- Test Case Development and Execution
- Bug Identification and Defect Reporting
- Software Development Life Cycle (SDLC)
- Agile Methodology
- Selenium WebDriver

**Project Management & Design Tools**

- Jira
- Figma

**Programming & Web Development**

- Python, PHP, JavaScript
- HTML, CSS

**Databases & Backend**

- MySQL, NoSQL, Firebase
- Oracle Database

**Hardware & Embedded Systems**

- Arduino, ESP32
- Sensors and IoT Systems

**Tools & Development Workflow**

- GitHub
- GitHub Pages
- Visual Studio Code
- Version Control

## CERTIFICATIONS

- Basic Java Programming
- AI Unleashed: Exploring Artificial Intelligence and Its Real-World Applications

## AWARDS & ACHIEVEMENTS

- System-Making Contest Winner (JobInterviewPro), 2025
- Top Performing Student, College of Engineering, University of Rizal System
- ASA Foundation Scholar, 2023–2027
